

**SCREENLIFTER  
SPLIT****DISPLAY SYSTEM**

The ScreenLifter Split represents yet another new addition to our range. The advantage offered by the mobile split-wall system is clear to see!

Instead of – as is normally done – re-mounting the highly sensitive narrow bezel and seamless screens each time, the particular split-screen set required can be mounted in-house on the ScreenLifter Split and on-site - using the tool-free fine adjustment system – with greater accuracy. This saves time and reduces the risk of damage to the sensitive narrow bezel and seamless display. Like the other ScreenLifter models, the ScreenLifter Split also has a continuously adjustable, electrical lifting unit and a practical 90° swivel function.

The ScreenLifter Split is available as a four-way solution for 4 x 42", 4 x 46", 4 x 55". The nine-way solution for 9 x 55" and 9 x 60" is coming soon. Further combinations and screen sizes on request!

**FEATURES & FUNCTIONS**

- Functional Design stand for Narrow-Bezel & seamless displays.
- Electrical self up- and unload function.
- Tool free setup by only 1 person in a few minutes.
- Secure transport system with shock absorbing system.
- Step less electrical height adjustment and 90° rotate function.
- Robust steel and aluminium construction.
